

GPMC Home Recording Standards – Cell Phone

Cell Phone Recording

Record inside, in a quiet space.

1

Find a place inside to set your cell phone horizontally. So it is stationary while recording. Friends may have trouble holding the phone steady.

2

Make sure you are standing or seated in a way that your head is in the center of the video and that there are no windows or lights behind you.

3

Press record, set the phone in its position, and take your place. Do a test to make sure you are heard and seen correctly.

4

Now it's time to record. Repeat step 3 and once in position take a deep breath and smile. You can have people off screen prompt you with questions but please leave space between question and answer. Watch and listen to your recording to ensure quality!

What do you enjoy about GPMC?

Responding After a Pause and a Smile
